

North American renewable energy company Invenergy joins ESN[®]

Invenergy selects ESN[®] to streamline settlement department operations and sees immediate results

LISLE, Ill. — April 26, 2018 — Invenergy, North America’s largest renewable energy provider, recently joined the Energy Settlement Network from Aquilon Energy Services. ESN is an innovative, cloud-based platform that automates the energy settlement process and helps members significantly improve operations, auditing, compliance, cash-flow management and security. With ESN, Invenergy’s settlement team can collaborate more easily with their counterparties and manage settlement information in a single, secure location.

“We are transforming our energy settlement operations with ESN,” said Danielle Hayter, senior manager, commercial settlements. “We had the majority of our trading counterparties join the platform within 45 days. By allowing us to interact with all of our counterparties in one place, ESN is helping us be more effective, managing an ever-increasing amount of transactions and meeting deadlines with greater efficiency.”

The Invenergy Future Fund was an early investor in Aquilon Energy Services, and introduced the company to Invenergy’s trading team. Invenergy quickly recognized the value of having their counterparties, communication and documentation organized on a secure, collaborative and cloud-based network. Invenergy now settles physical natural gas on ESN.

“We’re happy to see another major energy company such as Invenergy join the network and quickly experience the benefits of ESN,” said Jeffrey Wagner, founder and CEO of Aquilon Energy Services. “The driver behind ESN’s rapid growth is the significant value it delivers to energy companies, introducing operational efficiencies to the settlement process.”

ESN enables members to identify discrepancies early and prioritize the resolution of payment breaks. Further, the platform’s secure centralized hub for all counterparty communication, documentation and invoices facilitates real-time collaboration. And ESN prevents fraud and reduces the risk of lost or stolen data by making transactions transparent and traceable. Read more information about ESN’s rapid growth.
